

Corner Buffer

Corner Buffers (heavyweight) are designed to give drivers the maximum visibility using black and yellow stripes, the correct hazard warning colours. The solid rubber buffers wrap-around design protects your property, corners, columns and entrances that are exposed to vehicle and warehouse traffic.

Corner Buffers are manufactured in a solid tyre stock rubber compound. The buffer has two bright yellow stripes of self-coloured rubber that snap firmly into place covering the bolt heads after the installation, protecting your property and reducing the risk of accidental damage to vehicles.

Supplied pre-drilled and cut to the exact size any length from ½ metre to 3 metres long, the concealed fixing bolts are located underneath the yellow stripes. All Corner Buffers are shipped with detailed fixing instructions for a trouble free and fast installation.

This range of Corner Buffers is well proven and can be securely fitted to concrete or brickwork, plain or plastered.

Wide range of sizes available

CN2 All black rubber extrusion (medium weight) can be bonded and screwed to concrete columns or brickwork. Available in 1.5 metre lengths, it is easy to cut on site to a smaller length with a craft knife.

CN3 All black rubber extrusion (lightweight) usually bonded in to place. Available in 1.5 metre lengths, it is easy to cut on site to a smaller length with a craft knife.

For more information please give us a call, fax a sketch or send us a detailed drawing.

Questions and Answers

Which corner protector do I choose?

The largest CN1 has the feature of concealed fixings. The bolt heads are covered by the yellow strips of rubber. This is an important feature so the product can be used on all types of sites.

The all black corner protectors will offer some protection against accidental damage, but the fixing screwheads will remain on view.
